

Tested hardware

In 2007, KEMA performed an acceptance test on LDS fiber-isolated digitizers, and documented both the test setup and results in the following report:

TDT-HPL 07-63677A

Acceptance testing of Isolated Digitizer 6600 for current zero measurements of high-voltage circuit breakers in high-power testing.

Involved parties

In 2007 LDS was a subsidiary of SPX. LDS was purchased by Spectris plc in 2008. The instrumentation business was integrated into the product assortment of its subsidiary, HBM.

Brand name change

Under its new owner, the former brand name has now been replaced by **Genesis HighSpeed**.

The data acquisition system will be sold by HBM as part of their **GEN DAQ** product range. The products remain technically unchanged.
