

T10FM

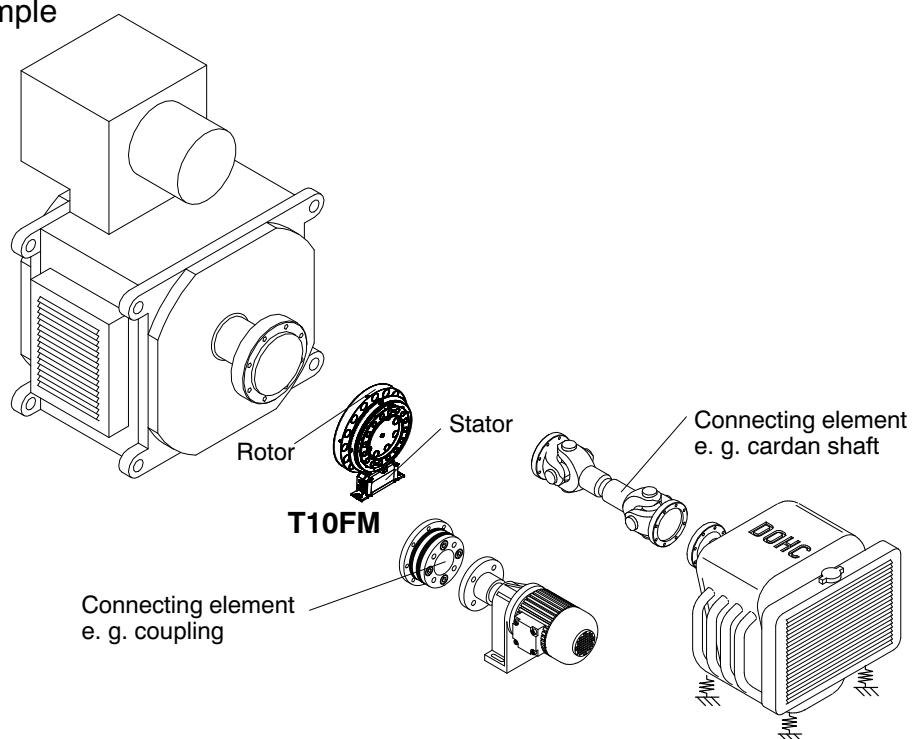

Torque Flange

Special features

- Nominal (rated) torque:
15 kN·m, 20 kN·m, 25 kN·m,
30 kN·m, 40 kN·m, 45 kN·m,
50 kN·m, 60 kN·m, 70 kN·m and
80 kN·m
- Nominal (rated) rotational speed
from 3000 rpm to 8000 rpm
- Short design
- High permissible transverse
forces
- High radial stiffness
- Contactless
- Integral speed measuring
system (optional)

⁵⁾ Each type of irregular stress can only be permitted with its given static limit values (bending moment, lateral or axial load, exceeding the nominal (rated) torque) if none of the others can occur. Otherwise the limit values must be reduced. If for instance 30 % of the bending limit moment and also 30 % of the lateral limit force are present, only 40 % of the axial limit force are permitted, provided that the nominal (rated) torque is not exceeded.

With the permitted bending moments, axial, and lateral limit forces, measuring errors of about 1 % of the nominal (rated) torque can occur. If the nominal (rated) torque has been exceeded, the signal output electronics' maximum modulation range must be taken into account.

⁶⁾ The impact of radial run-out deviations, eccentricity, defects of form, notches, marks, local residual magnetism, structural variations or material anomalies needs to be taken into account and isolated from the actual wave oscillation.
