- 1) When using variable transducer excitation voltage, clear the electrical isolation from the supply.
- 2) EtherCAT) is a registered brand and patented technology, licensed by Beckhoff Automation GmbH, Germany
- 3) Hub: IEEE1394b FireWire node or distributor
- 4) Hop: transition from module to module or signal conditioning/distribution via IEEE1394b FireWire (hub, backplane)
- 5) Mechanical stress is tested in accordance with European standards EN60068-2-6 for vibration and EN60068-2-27 for shock. The devices are exposed to an acceleration of 50 m/s<sup>2</sup> within the frequency range 5...65 Hz in all 3 axes. Duration of this vibration test: 30 minutes per axis. The shock test is implemented at a nominal (rated) acceleration of 350 m/s<sup>2</sup> for a duration of 6 ms, half sine and with shocks in each of the six possible directions.
